This applies only to M830 motherboards, in CNC's shipped from about mid 2011 to about mid 2016. These shipped with IDE hard drives which must be replaced with USB hard drives. Later CNC's shipped with USB hard drives.

Install new USB hard drive in USB port as shown at right.

To use the USB hard drive it is necessary to change the "boot sequence". To do this, turn on the OmniTurn and press the "Del" key until the screen labeled 1 below appears. If the OmnTurn does not display screen 1, turn it off and try again. Once at the screen, use the up/dn arrows to move the cursor, and the pg up or pg dn keys to cycle through the options as shown. Change Hard Disk to USB-HDD0, then press F10 to save and exit.

Standard CHOS Features	Frequency/Voltage Control		▶ Standard CR0S Textures	▶ Prequency/Voltage Control
Advanced BIOS Features	Load Uptimized Defaults	Turn OmniTurn on, then press	Advanced BIDS Features	Load Optimized Defaults
